

**Utilize a energia eléctrica
como opção ecológica**
Use electricity as an eco option

O automóvel eléctrico é bastante silencioso. O ruído mais forte produzido é o som das rodas no pavimento.

EV runs extremely quietly. The loudest noise it makes is the sound of the wheels rolling across the pavement.

Companhia de Electricidade de Macau - CEM, S.A.

Small changes in our everyday lives can make a big difference to reduce our carbon emissions that are causing global warming.

Activities	CO ₂ emission reduction
Use a refrigerator with Energy Efficiency Grade 1 instead of a Grade 3	- 79 kg per year*
Avoid leaving appliances on standby mode everyday	- 77 kg per year*
Turn off a thermo pot for 8 hours during night time everyday	- 77 kg per year*
Use a 10W compact fluorescent lamp instead of a 60W incandescent lamp for 8 hours everyday	- 57 kg per year*
Switch on a 32" LCD TV for 1 hour less everyday	- 23 kg per year*
Use one e-bill instead of paper bill	- 5 kg per year

If all families in Macao carry out the above six simple practices, the estimated annual carbon emission reduction will be up to 64,000 tons which require over two million trees to absorb.

For your first step to reduce carbon emission, visit www.cem-macau.com now and subscribe for the e-bill!

* The calculations are based on the figures that CEM's CO₂ emissions per kilowatt hour electricity is 0.39kg CO₂ in Jan 2010.

Electric Vehicle (EV)
zero emission

EVs, which are powered by electricity, are becoming increasingly popular because they are emission free. EVs are battery powered. Thus simply plug in a 13A power socket and go.

Recently CEM brought in an EV and set up two charging stations in CEM Building and Coloane Power Plant for carrying out pilot test and promoting green drive.

*With our joint effort,
we can help stop global warming and build a greener Macao.*
