Chat to win big prizes

To further enhance the function of CEM WeChat, we introduced Chatbot to provide 24/7 instant self-service to customers. Until 31 May, simply chat with the Chatbot about electricity related services and rate its performance. You will automatically enter our monthly lucky draw and have the chance to win **iPad, Apple Watch, Dyson Airwrap, shopping coupons and movie tickets**. Follow us now and chat!

A step forward to make our city greener

There are currently 172 charging spaces located in 35 public car parks and five streets across Macau, covering 70% of the public car parks. Charging is easy and convenient as EV owners can command the charging process, find EV charging stations and learn about charging methods with CEM e-Service App.

There are many other services in our e-Service App. Download and explore now!

Stay tuned and join our trendy lifestyle workshops

Want to learn how to prepare delicious and healthy dishes with the help of a professional chef, or how to make green decorative items with recycled materials? Workshops will be organized throughout the year to promote electric cooking and green lifestyle. Let's play our part to save our planet!

Enrolment can only be made through CEM Facebook fan page,  our page now and stay tuned to grab your seat.

New power technologies: Solar textiles

Two researchers at the University of Wisconsin are working to develop ways to weave and coat different fibers to increase their conductivity. This emerging technology could lead to portable and lightweight solar textiles, in which the printed or woven pattern of the fabric harvest sunlight.

Once developed, the new textile can be used for hundreds of applications like everyday clothing or home products like curtains to collect and store power. Though still in its early stages, this technology may be closer than you think!
