

'Clean Energy City Challenge' for youngsters

To celebrate its 50th anniversary, CEM launched the 'Clean Energy City Challenge' to spark the younger generation's interest in environmental protection, encouraging them to develop ideas for products, services or facilities that integrate clean energy infrastructures. 54 teams from 23 local secondary schools submitted their proposals.

Selected top 10 teams from two categories (F1-F3 & F4-F6) will have their models, featuring environmentally friendly classrooms, solutions for electric vehicles application, a park using kitchen waste to generate energy, an intelligent public lighting system, and many others, exhibited at the Macau Science Center from 22 to 30 October, 10:00am to 6:00pm.

Come to visit our exhibition, you can vote for your favorite projects and win fantastic prizes!

Optimizing and upgrading to suit your needs

We have been sparing no efforts to provide our customers with comprehensive online services. Our corporate website was recently revamped with a fresh look and newly-added features, it is now more convenient and simpler to access and use.

The new features include simplified registration and login method, quick bill payment, streamlined application flows, advanced consumption analysis, contracting services for business users, etc. Experience now!

Moving forward to build a smart city

To accelerate the realization of the important goal of the Macau SAR Government to build a smart city, CEM has been continuously investing resources to develop smart services. So far, the coverage of smart meters has reached nearly 40% of the total number of customers and is expected to reach 100% by 2025. No more meter reading submissions and estimated bills!

We are also studying the use of real-time data to streamline service processes, including real-time power reconnection, enabling the power supply service remotely, etc. In the future, the time required for the application of meter installation will be significantly shortened from the original 3 working days to within the same day.

Maintain your building safe

The building communal electric installations are co-owned by property owners and are all owner's responsibility to maintain them. Lack of regular maintenance will present safety risks to your building, which may result in power outages or fire. To avoid that, have communal electrical installations inspected periodically by an experienced electrical contractor. Property owners may look up the electrical contractor list on CEM website (www.cem-macau.com).
